

## New Version of Santos® Pro Now Available – Changes Included

Due to upcoming Santos® Technology-related products, the Digital Human Modeling & Simulation environment that contains all existing capabilities that continue to be developed since 2003 (formerly Santos®) is now called Santos® Pro.

Santos® Pro is now available with a concurrent/enterprise licensing scheme. While Santos® Pro users can continue to use the previously available, node locked licensing scheme, a new floating licensing scheme allows a number of acquired licenses of Santos® Pro to be shared within an organization. The Santos® Pro installation and licensing window has been updated to reflect these two licensing options. Please contact [Sales@SantosHumanInc.com](mailto:Sales@SantosHumanInc.com) if interested in updating your licensing scheme.

In addition, the Santos® Pro start-up process continues to be optimized and now includes Install and Uninstall components.

### **New Precision Grasping Capabilities:**

New Predictive Precision Grasping capabilities now predict the kinematics of precision grasps by targeting contact points, integrating hand and body posture predictions, and then wrapping unused fingers around targeted objects.

### **Avatars:**

During the ongoing process to upgrade the female avatars, the previous female avatars have been made available in the avatar library. This update includes various fixes.

### **Zone Differentiation Capabilities:**

Zone Differentiation capabilities within Santos® Pro continue to be added to, refined, and modified. Please contact [Support@SantosHumanInc.com](mailto:Support@SantosHumanInc.com) if you're interested in what Zone Differentiation is and/or what new features are available.

### **Motion Capture Capabilities:**

Motion Capture capabilities within Santos® Pro now support data from Animazoo and include support for hands and fingers.
