

Santos® Now Includes Precision Grasping

As a result of ongoing efforts with one of SantosHuman's significant research partners, Santos® now has capabilities that include full integration and coupling its predictive models for whole-body posture and precision grasping. Improvements in the algorithms used to couple autonomous posture prediction with precision grasping were also achieved. The next Phase in the development of advanced grasping prediction capabilities as outlined in a comprehensive, multi-year, road map with this research partner is being planned now and expected to begin soon.
