

## SantosHuman Inc. continues its support of the Naval Post Graduate School (Monterey, CA) in 2015

SantosHuman Inc. (SHI) has been providing the Naval Post Graduate School (NPS) with assistance in its courses on Digital Human Modeling and Simulation since 2012. This semester's course, MV4501 Simulation Application Practicum, provides students with extensive laboratory experience applying simulations to address a defense capability gap using simulation-based systems.

SHI scientists and product developers have essentially created a custom short course on predictive human modeling, which shoehorns into NPS's efforts. The SHI team provides lectures, demonstrations, and hands-on exercises that demonstrate the use of ETOWL® and Santos® Pro (two of The Company's products) to support the course mission.

The use of modeling and simulation in general, let alone the specific use of digital human modeling, is expanding considerably, and this work with NPS is just one example of how SHI helps support this important development.
